PROJECTS AND EXPERIENCE

Online Visual Object Tracking for UAV in Dynamic Environments *Sep. 2018 - Present*
Undergraduate Research Assistant at Vision4Robotics Group, Tongji University
Supervisor: Prof. Changhong Fu; *Co-advisor*: Prof. Peng Lu (Director of ArcLab, HKPolyU)

- Investigated correlation filter (CF)-based **visual object tracking** for unmanned aerial vehicles. By applying **machine learning & deep learning** techniques, we have improved the existing trackers on overall tracking performance in challenging scenarios with real-time operational capability. Related work has been published in journals and conferences.

- Proposed a lightweight and generalizable **triple attention strategy** on CF-based framework by exploiting mutual independence of the appearance model and feature responses to implement real-time tracking for UAV (accepted by *IROS 2020* as **first author**).
- Employed the adaptive **GMSD-based context analysis** and **dynamic weighted filters** for utilizing both contextual and historical information, and leveraged **lightweight convolution features** to efficiently raise the tracking robustness (accepted by *Neural Computing and Applications* as **first student author**).
- Exploited the inter-frame information between prediction and backtracking phases for further incorporating the **bidirectional incongruity error** into the CF learning (accepted by *ICRA 2020*).
- Proposed the adaptive **sample purification strategy** integrating with multiple convolutional features to tackle the issue of invalid samples (published in *IROS Workshop 2019*).
- Realized **nonsingleton fuzzy logic controllers** for unmanned aerial manipulators using MATLAB and ROS, reducing error rate by 20% compared to PID controllers in designed trajectories.
